

Project Tracker

Overview

Project Tracker helps companies who are in construction industry especially Roads, Pipelines, Bridges, Dams where in tracking and monitoring of activities is difficult from corporate office. and it helps in tracking the projects and activities which are getting executed remotely. This helps project engineers, supervisors and consultants to keep a record of activities they perform.

It helps in monitoring the project status by capturing the image of the activities over mobile with proof and supporting credentials. Software is having ability to capture the GPS position, real time images of the activities, date and time of the event captured.

Solution can also be integrated with ERP or PLM systems. The software allows to capture all minute details which is relevant for the project and helps organization to know the exact status of the project in terms of progress as well as expenses and project delays if any.

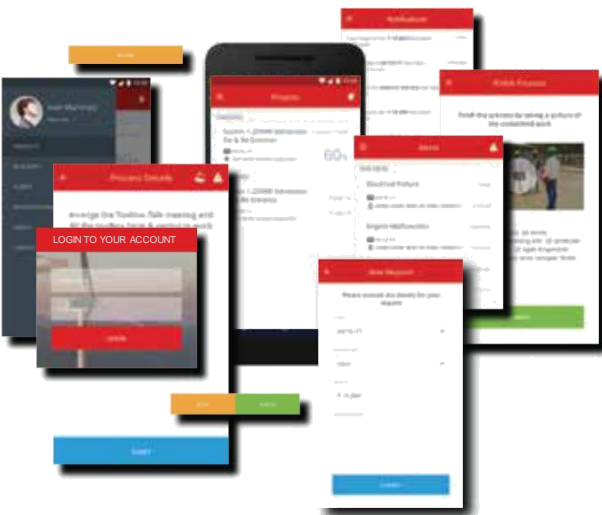

It is Perfect for service calls, installers, sales, contractors, or anyone who travels for work.

Mobile App

Job Tracker Mobile App enables your engineers to access their daily jobs via their mobile devices, collect scheduled jobs, upload photographs of the completed jobs, make notes and update the job progress.

Features:

- Get Alerts and Notification from admin side to start/finish the assigned project
- Raise the request for insufficient tools and cash
- Get the assigned task details daily wise till end of the project
- Feature to capture completed project work and upload to admin side

Web App

Job Manager was developed specifically for contractors by contractors who know the industry inside out and not by some faceless corporation looking to cash in. It automates time and GPS labor tracking, job costing reports and payroll reports for small to medium-size business owners.

Our experts created Job Manager to help you stay organized, save time and money, reduce costs and keep your clients happy. It's like having a project manager, a bookkeeper, and an assistant right in the palm of your hand.

Features:

- Uses geocoding to find the address of your location
- User editable client name and notes
- Saves location, date, time, address, client name, notes
- Monitoring the project and managing the requests raised by onsite contractors
- Managing the alerts and notifications for mobile app
- Export related reports that you can open in Excel or your favorite spreadsheet program

Our Services

MANAGE

Add tasks, workers, subcontractors and materials to a job. Auto import employee work details, job photos and site weather condition

SCHEDULE

Clock employees in and out of jobs. Schedule employees' days off. Instantly view employee GPS location and work details. Alternately, employees can install the free Job Manager Time Tracker app to select and clock themselves in/out of jobs and track their own work hours.

ORGANIZE

Track work details, employees, expenses and earnings by day, week, month and year as well as by categories.

EASY ESTIMATES & INVOICES

Estimate and invoice tools make it easy to invoice your customers and get paid. No limits on how many customers or invoices you can create.

AWESOME GALLERY

Take onsite photographs and upload them directly into the app and share with managers and teams. Take pictures of job receipts.

ARCHIVE INCLUDED

Archive functions allows you to view all of your previous projects any time with just a tap.

POWERFUL REPORTING

One project, multiple report views. Display job reports in daily, weekly, monthly, yearly and summary views. When a job is complete, Job Manager users are able to measure individual client or job profitability. Send any report directly to any E-mail address
